

Ball Valve

All-welded

AT 3590S, 3591S

Internet_Variants

Dimension range	PN	Temperature range	Material
DN 10-50	40	-20 °C up to 204°C	Steel
DN65-400	25		

Range of Application

As shut-off valve for warm and hot water systems, compressed air and gases, fluid group 2.

PSB.1 Ball valves

DN 10-150 with lever; Ball valve AT 3590S, DN ... Body of steel with weld ends. With longstem neck adapted for insulation.

For DN 200-400 with gear; Ball valve AT 3590V, DN ... Body of steel with weld ends. With longstem neck adapted for insulation.

Ball valve AT 3591 with lever, DN ... Body of steel with one weld end and one internal thread connection. With longstem neck adapted for insulation.

Function and Design

Fully welded pipe construction with weld ends, adapted for direct welding into pipe systems. The ball's reduced bore. The ball is clamped between two seat rings of PTFE. The valve is supplied as standard with high longstem neck for insulation. The stem top is thus always visible and possible to inspect. ISO top according to ISO5211.

Ball Valve

All-welded

AT 3590S, 3591S

Installation

The valve can be mounted in any position independent of the flow direction. Welding should be done with the valve in full open position. Note, in the case of gas welding the valve must be cooled down to protect the seat rings from damage.

Accessories and Options

Can be fitted with different types of actuators and limit switches.

Maintenance and Spare parts

The valve is practically maintenance free. However, there should be regular monitoring and maneuvering control for safe operation and function.

Marking

DN, PS, materials of pressure parts, year and month of manufacture, AT-No and CE-marking shown on the identification label.
